INDEX.

Adamson, Rev. M., on marine deposits on the margin of Loch Lomond, 72.

Adie, R., of Liverpool, account of thermo-electrical experiments, 352.

Agassiz, Professor, on the ichthyological fauna of the old red sandstone, 17.

Alison, Dr, on the principle of vital affinity, 132, 272.

Amber, on the insects it contains, by Professor Pictet, 391.

Anderson, Thomas, M.D., F.R.S.E., on the constitution and properties of picoline, a new organic base from coal-tar, 146, 291.

Annelides, on the development of, 430.

Arago, M., Perpetual Secretary of the French Academy of Sciences, on prognostication of the weather, 1.

Arthur Seat, observations on its polished and striated rocks, by David Milne, Esq., F.R.S., &c., 206.

Atmosphere, observations on its limits, by H. Meikle, 385—Sulphur in, by Boussingault, 414.

Aurunci, ancient city of, its site, &c., by Dr Charles Daubeny, F.R.S., &c., 213.

Bat, fossil species of, found in the tertiary formations of Weisenau, 417.

Beaches, ancient, near Stirling, account of, by Charles Maclaren, Esq., F.R.S.E., 402.

Birds, respiratory apparatus of, described, 427—Vocal organs of, described, 428—On their classification, by John Hogg, Esq., F.R.S., &c., 50.

Blood, colour of, in Planorbis imbricatus, 429.

Cleavage of slate-strata, account of, 422.

XUM

Cole's Cave in Barbadoes described, by Dr John Davy, 355.
Connell, Arthur, Professor, analysis of the American mineral Nemalite, 387.

Dana, J. D., on the origin of the constituent and adventitious minerals of traps and allied rocks, 195, 263.
Daubeny, Dr Charles, on the site of the ancient city of the Aurunci, and the volcanic phenomena it exhibits; with some remarks on craters of elevation, and on the distinction between plutonic and volcanic rocks, and on the theories of volcanic action which are at present most in repute, 213.
Davy, Dr John, his miscellaneous observations, chiefly chemical, 255—On the cause of induration of some siliceous sandstones, 300—Account of Cole's Cave in the Island of Barbadoes, 355.

Earthquake in Tuscany, Marseilles, on 19th August 1846, 423.
Eichwald, Dr E., on a gigantic stag, 425.
Escher de la Linth, on glaciers in Switzerland, 344.

Forbes, James, Professor, eleventh letter on glaciers by, 414.
Fluoride of calcium, its solubility in water, considered by Dr Wilson, 205.
Fleming, the Rev. John, on the recent Scottish madrepores, with remarks on the climatic character of the extinct races, 203.
Fish, the statics of, considered, 429.
Frogs, new species of, found in Tertiary formations of Osnabruck, 424.

Glaciers, observations on, in Switzerland, by M. Escher de la Linth, 344—observations on, by Prof. J. D. Forbes, 414.
Guiana, natives of, described by Sir R. Schomburgk, 361.

Hearing apparatus in the mollusca considered, 430.
Hogg, John, F.R.S., &c., on the classification of birds, and particularly of the genera of European birds, 50.
Horner, Leonard, F.R.S., President of the Geological Society of London, &c., his anniversary address, delivered at the meeting of the Geological Society, 75, 303.

Indian tribes of the north-west coast of America, by Dr Scouler, 168.

Lomond, Loch, marine deposits on its margin, noticed by Rev. J. Adamson, 72.
Lion as an article of food, 418.

Maclaren, Charles, Esq., F.R.S.E., on ancient beaches near Stirling, 402.
Meikle, H., Esq., on the limits of the atmosphere, and on compensation pendulums, 385.
Milne, David, F.R.S.E., his observations on the polished and striated rocks of Arthur Seat, 206.
Mollusca, their organs of hearing considered, 430.
Moon, its surface considered, by Captain Rozet, 128.

Nemalite, an American mineral, analyzed by Professor Connell, 387.

Patents, list of, granted for Scotland, from 23d March to 22d June 1846, 208—from 25th June to 21st September, 1846, 434.

Reid, Governor of Bermuda, on the winds, 192.
Rogers, Professor, on the cleavage of slate-strata, 414.
Rozet, Captain, on the surface of the moon, 128.

Sandstones, siliceous, on their induration, by Dr John Davy, 300.
Schomburgk, Sir R., account of the natives of Guiana, 361.
Scouler, Dr John, on the Indian tribes of the north-west coast of America, 168.
Scottish madrepores, observations on, by the Rev. Dr John Fleming, 203.
Stag, gigantic, account of, by Dr E. Eichwald, 425.
Stuart, J. G., on the turbine water-wheel erected at Balgonie Mills, Fifeshire, 156.

Trap-rocks, the origin of their constituent and adventitious minerals, by J. D. Dana, 195, 263.

Wilson, Dr G., on the solubility of fluoride of calcium in water, and

XUM

the relation of this property to the occurrence of that substance in minerals, and in recent fossil plants and animals, 205.

Winds, on, as influencing the tracts sailed by the Bermuda vessels; and on the advantage which may be derived from sailing on curved courses, when meeting with progressive revolving winds, by Governor Reid, of Bermuda, 192.

END OF VOLUME FORTY-ONE.

PRINTED BY NEILL AND COMPANY, EDINBURGH.
